

The "Egyptian Plagues" describe the enormous Venus cataclysms.

Exodus & Joshua → Events

The Joshua Event tells in "religious" terms of complexly interdependent 2 events emanating from an identical source which only since a century can be explained by observed evidence.

Mars Events →

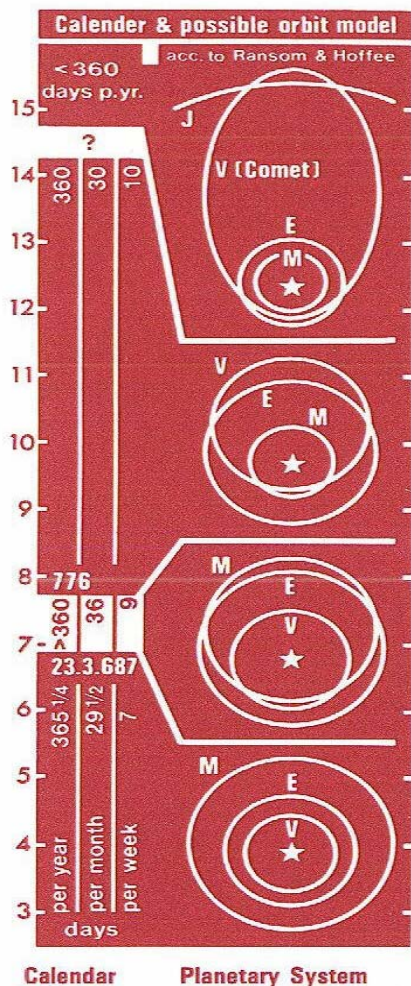

Great civilizations develop after the Mars Events under a peaceful sky for probably many hundreds of years, including the initial stages of global colonization down to South America.

This period, however, comes to an "apocalyptic" end (remembered in the apocalyptic texts) at the re-appearance of Venus together with her "child" Mercury, the

Venus/Mercury Events

holding sway over SchizoTime lasting for several generations until ending with the LGJ in the middle of the Trecento.

③ Reconstruction of Natural History

46	Electro-magnetic sources pervade the solar system (and universe)	55
46	Sun and planets carry electric charges and may possess strong magnetic fields	60
50	Jupiter is a dark star, and (1953) is a radio source	55
50	The atmospheres of Jupiter and Venus are related	
50	The atmosphere of Venus contains carbohydrates and hydrocarbons, e.g. petroleum gases, perhaps of organic origin, and from Jupiter	63
50	Venus is still blazing hot	62
50	Venus might rotate contrary to all other planets	62
50	Much of our petroleum originated in the 2nd millenium BCE (Venus encounter)	52
69	On the moon, too, petroleum hydrocarbons may be traceable	70
50	The inclination of the earth's axis of rotation was changed: <i>Klimasturz</i> ; the frigid zones are moved – settlements may be found on rivers Kolyma or Lena in permafrost	51

56	The magnetic field of the earth reaches at least out to the moon;	65
50	repeated magnetic reversals (e.g. from interplanetary discharges)	
55	occured down to at least the 7th century BCE	53

50	Many comets are young and the result of interplanetary catastrophes	53
50	Some meteorites and tails of comets contain hydrocarbons	51
50	Other meteorites contain argon and neon, as also do the rocks of the moon	61
45	The atmosphere of Mars contains argon and neon (from interplanetary discharges); strong radioactive hotspots on Mars and Moon arose from the same causes	74 72
50	Not more than 3000 years ago Mars was last subjected to heavy stress due to heating and tidal forces: the surface of Mars therefore bears moon-like features	72 74
50	On Mars craters were formed by bubbling of the melting surface	
50	The surface of the moon, too, was heated to melting point, bubbling causing most of the craters	70
69	The rocks of the moon will show remanent magnetism above what may be expected from its extremely weak magnetic field; their argon and neon content will make the moon appear older than the solar system itself	70 70

*	The ¹⁴ C «atomic» clock (¹² C : ¹⁴ C relation) changes: ¹⁴ C dates cannot be representative without calibration on historical chronology	
73		

19.. claimed «phenomena»

first confirmed 19..

The reported observations of celestial events (also having led to the advance claims of modern discoveries)

(1) disprove the basic theories of natural sciences (eg gravitational & relativity theories), while

(2) proving that the institutionalized Philosophies, Religions, & (exo- & esoteric) Sciences – the PRS-conglomerate – are delivering the Collective Repression, which drives the Irrational Behaviour of the Collective in Holocaust, War, Terrorism, & Destructive Technology.

Conventional physics are replaced by the Electric Vortex Universe EVU (New Perceptions in Physics, Chemistry & Celestial Mechanics)

It is not possible to join the conventional XC [Christian Calendar] timescale (limited here by the time of Alexander) to our own Modern Age, as retro-calculation of astronomical observations to find absolute dates before the middle of the Trecento ("1"4th century AD) due to the LGJ [Last Great Jolt] & earlier alterations of the earth's movements' parameters will ever remain unattainable.
