

Non-refutable inherent logic evidence for at least three re-positionings of the earth

(1) The "Joshua event", date unknown but many hundreds of years before the CCR

- A** *The Israelites saw their god in the sky* : contemporary "religious" explanation!
- B** *The god of the Israelites caused a meteor shower to fall* : contemporary "religious" explanation!
- C** *The god of the Israelites caused the sun and moon to stand still* : contemporary "religious" explanation!
- D** *Large celestial bodies passing near the earth can cause meteor showers* : **Recent modern** knowledge!
- E** *By making the earth tumble large celestial bodies passing near the earth can cause the sun and moon appearing to "stand still"* : **Recent** (not older than about a hundred years) **modern** knowledge!
- F** Since the Israelites **did not possess** modern astronomical explanations **but still** report the 3 observations A-C **together**, the report **must** be astrophysically true.

(2) The CCR ("Julian" Calendar Reform), according to the RHNH perhaps around -950 UC (1000 XC)

- A** The CCR added 1/4 of a day to a former 365 days per year calendar.
- B** The decree independently notes (Greek version 45/6) that the reform in addition takes account of the new "disposition of the pole" or the "general ordering of the heavens".
- C** Because the authors **knew nothing** about these astronomically interdependent phenomena, the CCR, too, was the result of an exoterrestrially caused re-positioning of the earth some years before.

(3) Cause of the GCR

- A** -573 UC (1372 XC): **First** document describing March 21 not agreeing with the spring equinox & the length of the year not measuring 365.25 days any longer.
- B** -370 UC (1575 XC): Start of astronomical observations regarding the March 21 tradition & the length of the year with the results that (i) 10 days have to be removed from the "Julian" calendar to re-introduce the equinox tradition again & (ii) a new leap-year rule for fixing the tradition in future in a year which had **now** been observed to have 365.2425 days only has to be introduced.
- C** -363 UC (1582 XC) GCR introduced.
- D** Because **two** to the science of the day **independent** phenomena (March 21 equinox tradition & changed year length) were discovered **together** by **observation** only 200 years before the reform of the calendar they caused, the earth **must** have been re-positioned some very few years before their discovery, obviously at the time of the last exoterrestrially caused catastrophe (Black Death) -597 UC (1348 XC).

ERGO! At least **3 independently** reported events having occurred many generations apart but producing **identical** evidence for **re-positionings** of the earth, viewed as an assembly of **facts** leave **absolutely no doubt** that they happened, & that therefore the planetary system **underwent changes until VERY recently** up to -597 UC (1348 XC).

This brief reasoning eliminates at one stroke from human & natural history beyond the first half of the Trecento **all** astronomically retro-calculated datings, enforcing the RHNH in historical years according to events analysis & stratigraphic evidence.

(Anybody inquiring into the XC should also be aware of the facts (i) that its "1st" millennium is a pure construct into which was designed the historiography the collective fondly believes in by the chronographers of the Trecento & the Quattrocento (still named for the real historical value they represent), & (ii) that astronomical retro-calculations due to the re-positionings of the earth are not possible before -590 UC, ie before the middle of the Trecento.)

A New Timeline for the Historic Ages				
OLD TIME		SCHIZO TIME	NEW TIME	PRESENT
 	 [☆☆]	 	 peaceful sky fading comet activity	
Saturn/Jupiter Venus	Mars	Venus_Mercury		
DesAster series spawn Old Dynasties & pilot the development of civilisation		Survival chaos & innovations	"Apocalypse" is compulsively repeated because of collective amnesia	Attempt at RHNH
